Tianhu Peng

Robotics Researcher | Humanoid Motion Generation & Control

University College London | London, United Kingdom

pengtianhu@gmail.com | Website | Scholar | GitHub | LinkedIn

Profile

PhD researcher at UCL specialising in **humanoid motion generation, whole-body control, and robot learning**. Research focuses on reinforcement and imitation learning for locomotion and streaming generative motion on Unitree humanoids, with earlier experience implementing inverse-dynamics whole-body control at Tencent Robotics X.

Availability: PhD thesis submission expected April 2027; start date negotiable. Open to full-time roles and internships with potential conversion.

Core Skills

Software: Python, C++, PyTorch, ROS/ROS2, DDS, Git, Linux.
Learning: PPO, imitation learning, adversarial motion priors, curriculum learning, diffusion policies, teacher–student distillation.
Control and deployment: whole-body control, task-space tracking, contact constraints, sim-to-real transfer, real-robot integration and debugging.
Tools and platforms: Isaac Gym, Isaac Lab, MuJoCo, Pinocchio, Unitree SDK; Unitree G1/A1.

Selected Research and Engineering Projects

AHEADance: Streaming Humanoid Dance — Unitree G1

- Developed a robot-native dance generator that anticipates upcoming music using reliability-weighted forecasts of streaming audio.
- Trained continuation from committed motion chunks and deployed generated motion on a physical G1 through whole-body tracking. Co-first-author T-RL submission.

Unified Humanoid Locomotion — Unitree G1

- Built a recurrent, gait-conditioned policy with a multi-phase curriculum and reward routing for standing, walking, running, and gait transitions.
- Demonstrated stable standing, walking, and gait transitions on a physical G1. Published at IEEE-RAS Humanoids 2025.

Bipedal Walking with Adversarial Motion Priors — Unitree A1

- Combined adversarial motion priors with teacher–student learning; evaluated bipedal walking on flat and challenging terrains in simulation. **TAROS 2024 Best Paper Award**.

Industrial Research Experience

Tencent Robotics X Laboratory — Jul 2022 – Apr 2023
Robotics Research Intern, Control Center Department — Shenzhen, China

- Implemented an inverse-dynamics-based whole-body controller.

Education

University College London (UCL) — Nov 2024 – Present
PhD in Robotics – ongoing — London, UK

University of Leeds — May 2023 – Oct 2024
Doctoral Research in Robotics; transferred to UCL — Leeds, UK
Completed first-year doctoral training and transfer viva before continuing at UCL.

Imperial College London — Oct 2020 – Oct 2021
MSc Human and Biological Robotics – Merit — London, UK

University of Sheffield — Sep 2017 – Jul 2020
BEng Mechatronics and Robotics Engineering – First Class Honours — Sheffield, UK

Teaching and Communication

- **UCL, Teaching Assistant – Legged Robot Systems (2025–present):** support practical teaching, coursework, and debugging in robot control, simulation, and reinforcement learning.
- **Imperial College London, Graduate Teaching Assistant – Robotics (2021):** assisted with programming exercises and laboratory work.
- Invited presentation at NVIDIA Robotics Day on humanoid locomotion and distillation-based training in Isaac Lab.

Robot System Deployment

ATEC Humanoid Robot Track: deployed a full-scale Unitree G1 under competition constraints for dynamic balance, outdoor traversal, and teleoperated whole-body manipulation.
